

Liferay portal

MIROSLAV BERANIČ, DIMITAR IVANOVSKI

24.4.2019

bintegra »

Kdo smo?

- Kje: Sedež v Mariboru, pisarna tudi v Ljubljani, del Solvera Lynx skupine.
- Temeljna področja: Integracijske rešitve, portali za samooskrbo strank, namenske poslovne aplikacije, integracija družbenih omrežij in CRM sistemov.
- Glavni trgi: Slovenija, Avstrija, Hrvaška.
- Tehnologije: Tibco, Java, Spring Framework, Liferay Portal, Apache ServiceMix, OSGi
- Produkti: Bihub.

bintegra»

Stranke in reference

www.bintegra.com

Backend-end razvoj za Liferay Portal:

- Pregled in primerjava portalnih rešitev
- Razvoj in spremembe skozi zgodovino
- Poslovne in tehnične potrebe
- Tehnologije in orodja
- Razlike in povezave med Liferay orodji
- Osnove OSGi
- Integracija z LDAP
- Integracija s SOAP
- Integracija s SSO
- Integracija z Alfresco DMS

Front-end razvoj za Liferay Portal:

- Razlike med Liferay 6 in Liferay 7. Prednosti in slabosti. Prikaz naših rešitev.
- Bootstrap in Clay
- Templates in FreeMarker files
- Theme Dev: Node.js, NPM, GULP in Liferay Gulp Tasks, Liferay Theme Generator, HTML5, SASS, JavaScript in jQuery.

(Live coding del):

- Na novem strežniku naredimo nov portal in generiramo novo temo.
- 1.vaja: Theme customization. Embedded portlets. Layout templates.
 - 2.vaja: Navigacija
 - 3.vaja: Lokalizacija
 - Responsive design simulation
 - 4.vaja: Vloge

Pregled in primerjava portalnih rešitev

- Jahia
- Kentiko
- CoreMedia
- OpenText
- SAP
- Salesforce
- Oracle
- Microsoft
- BloomReach
- Episerver
- Liferay
- Adobe
- IBM

Vloga in razlika glede na CMS/WCM

- eZ Systems
- Kentiko
- SDL
- CoreMedia
- OpenText
- BloomReach
- IBM
- Oracle
- Episerver
- Adobe

- WordPress
- Magnolia
- Shopify
- Joomla!
- Magento
- Drupal
- Crafter CMS

Razvoj in razlike med verzijami

- 6.0
(The main mechanism that you as a developer will use to achieve all of the above in a modular way are Liferay Plugins. Liferay Plugins are always distributed as Web Archives (.war files), and deployed through Liferay's deploy mechanisms.)
- 6.2
(Liferay 6.2's OSGi runtime is experimental and unsupported. It should be considered a technology preview at this time.)
- 7.0
(Liferay Portal is modular too. It comprises code modules created and tested independently and in parallel. It's a platform on which modules and modular applications are installed, started, used, stopped, and uninstalled. Liferay Portal's components use the OSGi modularity standard.)
- 7.1 - samo OSGi
- 7.2 - izboljšave

Liferay Portal 7.1

Poslovne in tehnične potrebe za portalno rešitev

- Portalna rešitev ni rešitev za vse
- Primarno uporabna za podjetja, ki potrebujejo osrednjo enotno okolje za povezovanje strank, zaposlenih, sodelujočih
- Izgranja intranet in extranet rešitev
- Poenotenje upravljanja vsebine in komunikacijskih kanalov znotraj in izven podjetja
- Enotno razvojno okolje

Tehnologije in orodja

- SOAP
 - JAX WS
 - Apache CXF
- JMS
 - Apache ActiveMQ
- REST
 - JAX RS
 - Restlet
 - Netty
- JPA
 - Hibernate
- Spring Framework
 - Spring Core (Context, Data)
 - Spring MVC
 - Spring Boot
 - Spring Integration
- LDAP, SSO, CMIS, OSGi
- Apache Karaf / ServiceMix
- Apache Camel
- Apache Cellar
- Apache Directory Studio
- Apache Spark
- Apache Kafka
- Jasig CAS
- Keycloak
- Liferay IDE, Liferay Dev Studio
- IntelliJ IDEA, DataGrip
- Apache Ant
- Apache Maven
- SoapUI
- Blade

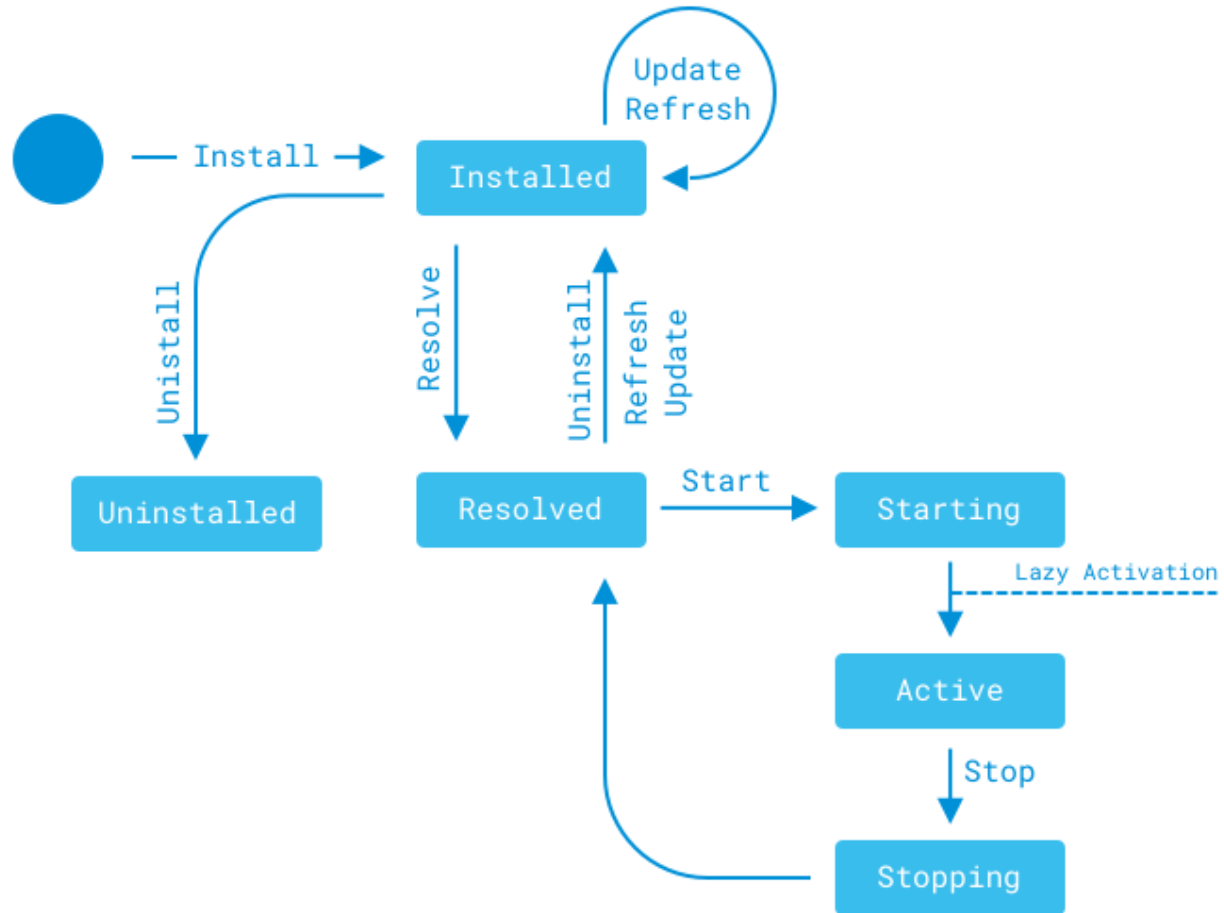

Tipične komponente arhitekture

Razlike med Liferay Portal CE in

- Liferay Portal CE je osnova za manjše podjetje, z omejenimi vgrajenimi funkcionalnostmi
 - Veliko funkcionalnosti se "enostavno" implementira ali prilagodi
 - Podpora s strani forumov, mailing list, itd
- Liferay Enterprise oz. Liferay DXP ima več razširitev oz. razširitve imajo večji nabor funkcionalnosti
 - Potrebno je vedeti za kaj se bodo uporabljale dodatne funkcionalnosti
 - Podpora s strani Liferay-a
- Liferay Portal CE podpora "odprto kodne" projekte, Liferay Portal EE oz. DXP pa je naravnan za velika podjetja in podpora EE rešitve
- Commerce – majhni koraki Liferay-a v vode B2B in B2C nakupovalnih okolj
- Liferay Sync – sinhronizacija datotek z lokalnim računalnikom

OSGi

OSGi

- Moduli opišejo svoje potrebe in sposobnosti v meta-podatkih, okolje poskrbi, da so potrebe zadoščene in sposobnosti propagirane
 - Posebej potrebno paziti na import, export in verzije paketov
 - Import in export se dela na nivoju Java paketov, zato še toliko bolj pomembno primerno poimenovanje Java paketov
- Enostavnejše objavljane in pridobivanje funkcionalnosti
 - Kodira/prevaja se napram API-ju, pri izvajanju se ožiči izbrana implementacija
- Funkcionalnosti so razdrobljene v posamezne Java arhive – JAR datoteke, ki imajo dodatne meta datotečne opise
- Določen in znan je življenjski cikel modula
- V Liferay 7.1 je prvič OSGi "first class citizen"
- Liferay "še vedno" dodaja lastne anotacije, ki niso del splošne specifikacije, tako da pogosto moduli niso prenosljivi, a se bo to v prihodnjih verzijah izboljšalo/spremenilo

OSGi

struts-config.xml

```
<action path="/login/login"  
    type="com.liferay.portlet.login.action.LoginAction">  
  
    <forward  
        name="portlet.login.login"  
        path="portlet.login.login"  
    />  
  
    <forward  
        name="portlet.login.login_redirect"  
        path="portlet.login.login_redirect"  
    />  
</action>
```

OSGi

liferay-hook.xml

```
<struts-action>
```

```
  <struts-action-path>/portal/sample</struts-action-path>
```

```
  <struts-action-impl>
```

```
    com.liferay.sample.hook.action.ExampleStrutsAction
```

```
  </struts-action-impl>
```

```
</struts-action>
```

```
<struts-action>
```

```
  <struts-action-path>/login/login</struts-action-path>
```

```
  <struts-action-impl>
```

```
    com.liferay.sample.hook.action.ExampleStrutsPortletAction
```

```
  </struts-action-impl>
```

```
</struts-action>
```

ExampleStrutsPortletAction.java

```
public class ExampleStrutsPortletAction extends BaseStrutsPortletAction {

    public void processAction(
        StrutsPortletAction originalStrutsPortletAction,
        PortletConfig portletConfig, ActionRequest actionRequest,
        ActionResponse actionResponse)
        throws Exception {
        ThemeDisplay themeDisplay =
            (ThemeDisplay)actionRequest.getAttribute(WebKeys.THEME_DISPLAY);

        Long currentuser = themeDisplay.getUserId();

        if (currentuser != null) {
            System.out.println("Wrapped /login/ action2");
        }
        originalStrutsPortletAction.processAction(
            originalStrutsPortletAction, portletConfig, actionRequest,
            actionResponse);
    }
}
```

OSGi

ExampleStrutsAction.java

```
public class ExampleStrutsAction extends BaseStrutsAction {  
  
    public String execute(  
        HttpServletRequest request, HttpServletResponse response)  
        throws Exception {  
  
        String name = ParamUtil.get(request, "name", "World");  
  
        request.setAttribute("name", name);  
  
        return "/portal/sample.jsp";  
    }  
}
```

sample.jsp

```
<%  
String name = (String)request.getAttribute("name");  
%>  
Hello <%= name %>!
```

portal-ext.properties

```
auth.public.paths=\
    /asset/get_categories,\
    ...
    /wiki/rss,\
    /portal/sample
```

OSGi

my-login.jsp

```
<%@ include file="/init.jsp" %>
<p>
  <b><liferay-ui:message key="myloginportlet_MyLogin.caption"/></b>
</p>
```

MyLogPortlet.java

```
@Component(
  immediate = true,
  property = {
    "javax.portlet.init-param.view-template=/my-login.jsp",
    "javax.portlet.name=" + LoginPortletKeys.LOGIN,
  },
  service = Portlet.class
)
public class MyLoginPortlet extends MVCPortlet {
}
```

Integracija z LDAP strežnikom

V uporabi predvsem dve implementaciji LDAP-a:

- Strežnik
 - Apache Directory
 - 389 Directory Server (RedHat / Fedora)
- Uporabniški vmesnik
 - Apache Directory Studio
- Centralna hramba uporabnikov - uporabniška imena, gesla, kontaktni podatki, dostopne pravice
- Integracija direktno z Liferay Portal ali preko SSO strežnika (Jasig CAS ali Keycloak)

Integracija s SOAP storitvijo

Za komunikacijo s SOAP spletno storitvijo se praviloma uporablja orodje/ogrodje/knjižnica Apache CXF v povezavi z Apache Maven "build" orodjem. Predvsem s stališča, ker se ta nabor orodja uporablja skozi vse druge komponente v arhitekturi (primarno v storitvenem vodilu in/ali povezanih aplikacijah).

Prednost je predvsem v poenotenju nabora knjižnic/orodij, s katerimi se srečujejo razvijalci.

Praviloma se najprej napiše/definira spletni vmesnik z WSDL, nato se naredi implementacija strežnika in odjemalca.

Pri implementaciji SOAP odjemalca je potrebno poskrbeti za preverjanje dostopnih pravic.

Integracija s SSO (Jasig CAS) in OAuth 2.0

- SSO – Single Sign-on – enotna vstopna točka za prijavo uporabnikov
- Pogosto se naredi integracija med Liferay in SSO strežnikom, SSO strežnik pa nato dalje v povezavi z drugimi protokoli – LDAP, OAuth 2.0, Kerberos, itd.
 - Predvsem v javno dostopnih portalnih rešitvah
 - Najpogosteje se uporablja v povezavi z LDAP in SQL/JDBC
- V preteklosti smo največ oz. praktično vse SSO integracije/rešitve naredili z uporabo projekta Jasig CAS; v prihodnje se vedno bolj spogledujemo s projektom Keycloak
 - Keycloak ima komunikacijske točke uporabne/primerne za druge komponente v celotni arhitekturi – recimo tudi dostop do strežniških instanc (uporabniki na računalnikih)
 - Jasig CAS je enostavneje za uporabo v relaciji z Liferay Portal in Alfresco DMS

Integracija s SSO (Jasig CAS) LDAP

🔗 LDAP Connection Settings

The following options apply to features that integrate with an LDAP server (i.e. authentication, attribute resolution, etc) given the provider's *configuration key*:

```
1  #${configurationKey}.ldapUrl=ldaps://ldap1.example.edu ldaps://ldap2.example.edu
2  #${configurationKey}.bindDn=cn=Directory Manager,dc=example,dc=org
3  #${configurationKey}.bindCredential=Password
4
5  #${configurationKey}.poolPassivator=NONE|CLOSE|BIND
6  #${configurationKey}.connectionStrategy=
7  #${configurationKey}.providerClass=org.ldaptive.provider.unboundid.UnboundIDProvider
8  #${configurationKey}.connectTimeout=PT5S
9  #${configurationKey}.trustCertificates=
10 #${configurationKey}.keystore=
11 #${configurationKey}.keystorePassword=
12 #${configurationKey}.keystoreType=JKS|JCEKS|PKCS12
13 #${configurationKey}.minPoolSize=3
14 #${configurationKey}.maxPoolSize=10
15 #${configurationKey}.validateOnCheckout=true
16 #${configurationKey}.validatePeriodically=true
17 #${configurationKey}.validatePeriod=PT5M
18 #${configurationKey}.validateTimeout=PT5S
19 #${configurationKey}.failFast=true
20 #${configurationKey}.idleTime=PT10M
21 #${configurationKey}.prunePeriod=PT2H
22 #${configurationKey}.blockWaitTime=PT3S
23 #${configurationKey}.useSsl=true
24 #${configurationKey}.useStartTls=false
25 #${configurationKey}.responseTimeout=PT5S
26 #${configurationKey}.allowMultipleDns=false
27 #${configurationKey}.allowMultipleEntries=false
28 #${configurationKey}.followReferrals=false
29 #${configurationKey}.binaryAttributes=objectGUID,someOtherAttribute
30 #${configurationKey}.name=
```

Integracija s SSO (Jasig CAS) OAuth 2.0

Example (Maven dependency):

```
<dependency>
  <groupId>org.pac4j</groupId>
  <artifactId>pac4j-oauth</artifactId>
  <version>${pac4j.version}</version>
</dependency>
```

Example to simulate the GithubClient:

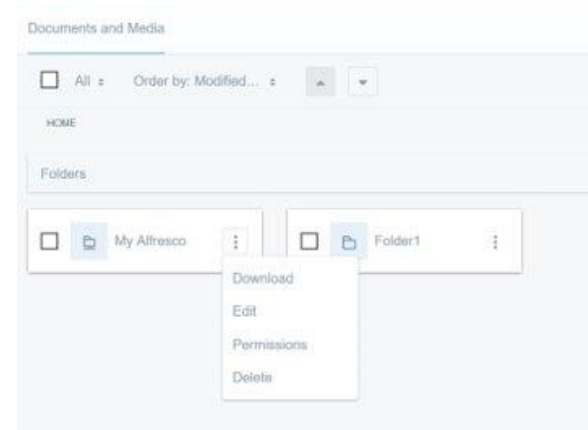

```
OAuth20Configuration config = new OAuth20Configuration();
config.setApi(GitHubApi.instance());
config.setProfileDefinition(new GitHubProfileDefinition());
config.setScope("user");
config.setKey("62374f5573a89a8f9900");
config.setSecret("01dd26d60447677ceb7399fb4c744f545bb86359");
OAuth20Client client = new OAuth20Client();
client.setConfiguration(config);
client.setCallbackUrl(PAC4J_BASE_URL);
```

<http://www.pac4j.org/docs/clients/oauth.html>

Identity provider	Client	User profile
BitBucket	BitbucketClient	BitbucketProfile
a CAS server using the OAuth protocol	CasOAuthWrapperClient	CasOAuthWrapperProfile
DropBox	DropBoxClient	DropBoxProfile
Facebook	FacebookClient	FacebookProfile
Foursquare	FoursquareClient	FoursquareProfile
Github	GitHubClient	GitHubProfile
Google	Google2Client	Google2Profile
HiOrg-Server	HiOrgServerClient	HiOrgServerProfile
LinkedIn	LinkedIn2Client	LinkedIn2Profile
Odnoklassniki	OkClient	OkProfile
ORCID	OrcidClient	OrcidProfile
Paypal	PayPalClient	PayPalProfile
QQ	QQClient	QQProfile
Strava	StravaClient	StravaProfile
Twitter	TwitterClient	TwitterProfile
Vk	VkClient	VkProfile
Wechat	WechatClient	WechatProfile
Weibo	WeiboClient	WeiboProfile
Windows Live	WindowsLiveClient	WindowsLiveProfile
Word Press	WordPressClient	WordPressProfile
Yahoo	YahooClient	YahooProfile

Integracija z Alfresco DMS

- Alfresco DMS je odprtokodni projekt, ki je namenjen za hrambo dokumentov
- Eden redkih odprtokodnih projektov certificiran/akreditiranih za hrambo/arhiv dokumentov s strani Arhiva RS (Register elektronske hrambe)
- Izmenjava podatkov preko CMIS protokola
- CMIS protokol implementira tudi (med drugim):
 - Microsoft Sharepoint
 - OpenText Documentum(za ta dva projekta je podpora samo v Liferay EE)
- Liferay Portal ima za dokumente namenski "portlet" (nabor portlet-ov), ki se imenuje "Liferay Portal's Documents and Media"

Povzetek prvega dela

- Razvoj v Liferay Portal 7.1+ je veliko enostavnejši, kot kadarkoli prej, po zaslugi OSGi
- Liferay Portal raste v smislu nabor funkcionalnosti in uporabnosti le teh
- Liferay dodaja nove projekte/produkte in ostreje ločuje med CE in EE
- Liferay Portal je eden od mnogih, a zagotovo eden bolj atraktivnih za naše okolje
- Mogoče so številne integracije, pri tem je potrebno uporabiti smiselno rešitev, glede na zastavljeno arhitekturo
- Liferay Portal je primeren za intranet in extranet spletne strani
- V povezavi z Alfresco DMS dobro deluje tudi kot hramba dokumentov

- Priporočena redna izobraževanja, saj se vsako leto spremeni veliko stvari
 - Konference
 - Izobraževanja
 - Dogodki
 - Mailing liste
 - Forumi
 - Vaja dela mojstra

Ustvarjanje Liferay temo

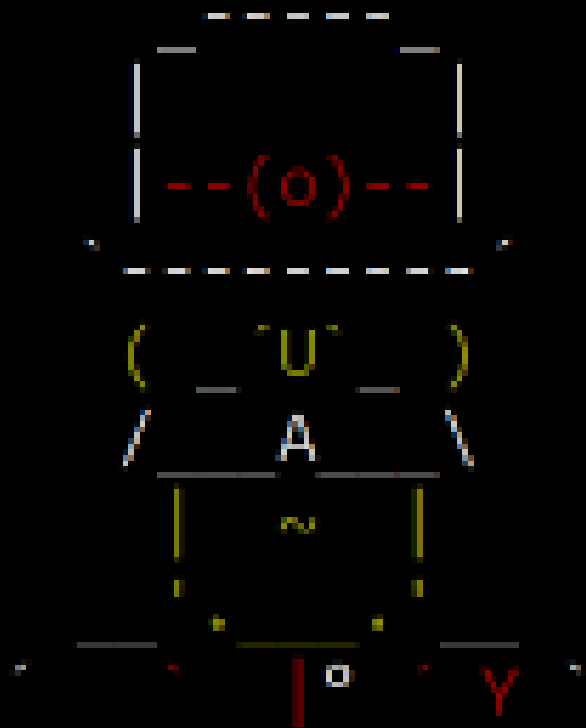

- Celoten „look and feel“ portala
- Kombinacija CSS, JavaScript, HTML in predloge FreeMarker
- Razvojno okolje: Node.js, NPM, GULP
- Liferay Gulp Tasks, Liferay Theme Generator

Razvojno okolje

Liferay Theme Generator

C:\Users\liferay\Desktop\projects\themes\7-1-th

```
Welcome to the splendid  
Liferay Theme generator!
```

? What would you like to call your theme? (My L

Gulp Tasks

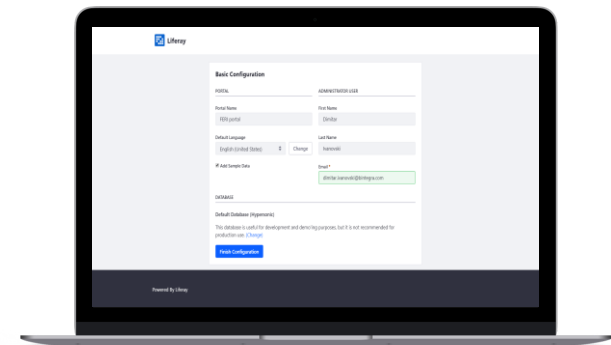

- `build`: generates the base theme files, compiles Sass into CSS, and zips all theme files into a WAR file that you can deploy to a Liferay server.
- `deploy`: runs the `build` task and deploys the WAR file to the configured local app server.
- `extend`: allows you to specify a base theme to extend. By default, themes created with the [Liferay Theme Generator](#) are based off of the [styled theme](#).
- `kickstart`: allows you to copy the css, images, js, and templates from another theme into the `src` directory of your own. While this is similar to the `extend` task, kickstarting from another theme is a one time inheritance, whereas extending from another theme is a dynamic inheritance that applies your src files on top of the base theme on every build.
- `init`: prompts you for local and remote app server information to use in theme deployment.
- `status`: displays the name of the base theme/themelets your theme extends.
- `watch`: allows you to see the changes you make to your theme without requiring a full redeploy. After invoking the `watch` task, every time you save any changes to a file in your theme, applicable changes are compiled and they're copied directly to your app server. **Note:** In order for the `watch` task to work, you must have [Developer Mode](#) enabled.
